Time to Implement Dream Plan

If IT budgets are soaring and manageability becomes complex, here we support you. Our embedded terminals (Linux / XP) can access any server based windows office suite, or any Unix/ DOS based legacy applications.

We would like to share our experiences with you regarding substantial savings in IT expenditures and hassle free computing experienced by our known big corporate customers where the TOTAL COST OF OWNERSHIP reduces dramatically.

Thin Clients are highly successful for 95% computing activities of any organization like data entry, accessing data, mail, browsing, chat, running MP3 audio / video files. It is certainly not for heavy engineering applications like 3D rendering / extensive video streaming applications, as it demands high resources like powerful processor, memory and the local storage.

How to achieve an effective saving

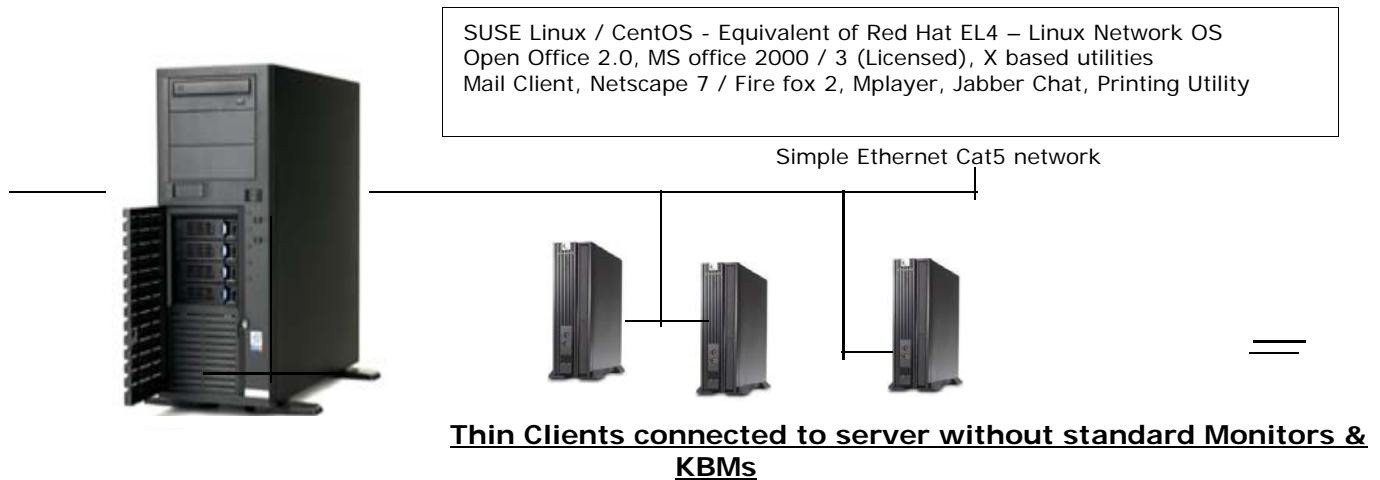

Action Desired	Definite advantage	Benefits / Savings
Existing hardware can be made diskless, using ProXboot card in your old PC.	Single point of control No frequent upgrades Reduction of AMC calls Standardization of applications	Legacy hardware in use. Reduction in HW budget by minimum 50% .
Use of ProXterm instead of fat PCs. In-house developed OS named AnyOS™	Proprietary desktop license, and Client access license cost to server is zero .	Hardware is 25% cheaper than PC with the same advantage. No frequent upgrades or obsolescence.
Use of NOWS (Novell open work group server) The suite costs as little as one-third the price of an equivalent Microsoft product stack and that's just on licensing front.	SUSE Linux based OS is more robust and feature rich for heterogeneous environment. Open office having high degree of inter-portability with Microsoft Office. You get the same functionality at fraction of the price.	Huge savings on office suite and desktop OS amounting to minimum Rs 18,000 /- per desktop.
Use of ReSOLve (Concern Management Application) [No Licensing burden]	In house developed Web based applications that takes you beyond the Help-Desk	Daily complaints from various business units are monitored and analyzed for better productivity and instant solutions.

In a Nut shell

Given the opportunity, we would like to meet business challenges at customer reducing overall hardware, software burden, reducing cost of ownership continuously with hassle free computing, that will be monitored centrally.

**Universal connectivity through Diskless Graphic Terminal for
 Windows / UNIX / Linux / Novell / Solaris / AS 400 / Citrix platforms**

The Windows Applications you need - on Linux Thin Clients

This is most apt for organizations planning expansions and those plan for the future so that they do not go in for the wrong solutions and retrace steps, which could result in loss of time, resources and money.

Cotmac-Proex can study in detail, the customer's current IT infrastructure and help them to build a road map to the future. This will make sure that the customers will have a high availability of IT infrastructure to cater increased demand in computing and also reduce wastage of money.

- ◆ Re-engineer your existing business workflow with our custom application solutions.
- ◆ Make your business more agile by streamlining current processes and by revamping your legacy Applications.
- ◆ We can also make your applications available 24/7 by clustering and load balancing.
- ◆ **At the data center level, we can also work with you to integrate and manage enterprise servers with SAN Infrastructure**

Further

In addition to DnsFly - a secured DNS appliance, our consortium with UX-World Inc. based in Hawthorne, New York offers technology-consulting services that draw on our expertise in security consulting, dynamic web building and customized application development on open source products.

Among the strengths that distinguish us from other technology firms are our:

- ◆ 20-year track record in technology and project management
- ◆ Ability to integrate Open Source with HP-UX, Solaris and other enterprise computing platforms
- ◆ Consulting experience at leading New York City financial institutions mastery of High Availability and clustering (EMC, Veritas);
- ◆ Proficiency troubleshooting and resolving complex mission-critical problems in multi-tiered environments
- ◆ Ability to build and integrate higher-end server platforms such as Solaris, Linux, HP-UX, Oracle, Sybase and SAN
- ◆ Understanding of clients' business demands and their need to develop working prototypes on deadline
- ◆ Our proven guarantee of network-wide computer security in even the most complex environments.
